

Java Installation

Check for installation

First, you want to make sure you need to install Java.

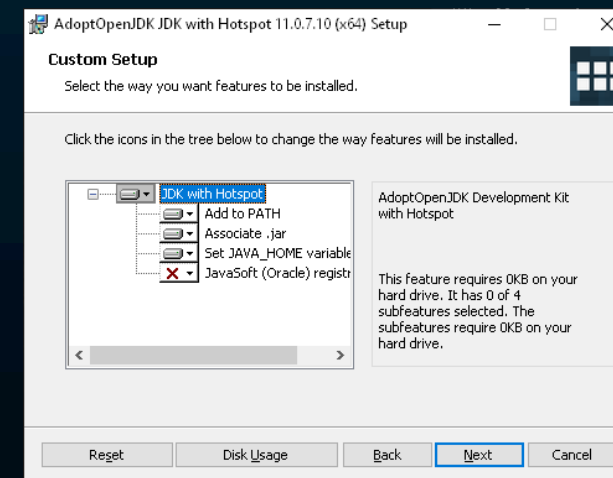

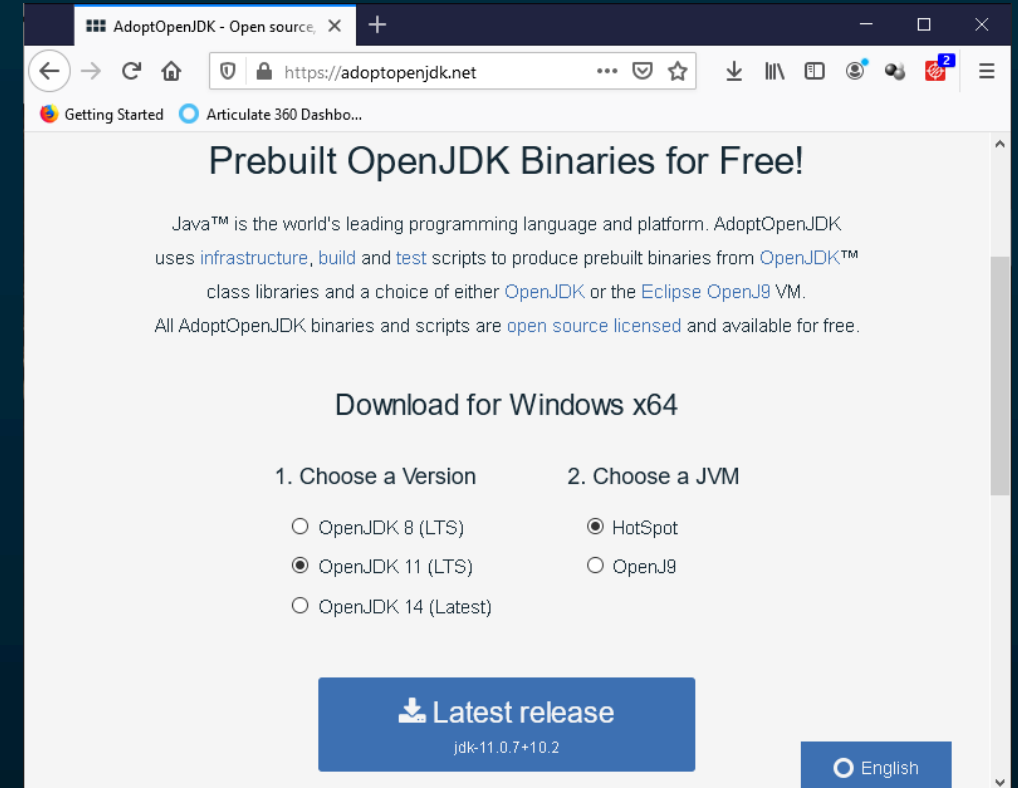

- Type “cmd” into the windows search bar to open a command prompt or open a terminal window on your Mac.
- Type “javac --version”
- If it displays “javac 11.x.x” you can skip the next page.

Java Install

Navigate to
adoptopenjdk.net

and install the latest OpenJDK 11
with HotSpot as shown.

Ensure that Add to PATH, Associate
.jar, and Set JAVA_HOME are
selected for install.

Eclipse Install

Navigate to

www.eclipse.org/downloads/

and download the latest version of Eclipse IDE.

Choose “Eclipse IDE for Java Developers”
